PROFESSIONAL SUMMARY

- Software Engineer with 2 years of experience engineering scalable backend microservices and production-grade web applications utilizing Java and Spring Boot 3.
- Backend & Cloud Integration: Skilled in building secure REST APIs using Spring Data JPA (Hibernate) and Spring Security, with hands-on experience deploying cloud-native solutions via AWS (S3, SQS, SNS, EC2, Lambda, DynamoDB, Bedrock, OpenSearch).
- Frontend Development: Proficient in designing responsive, component-driven user interfaces leveraging React, HTML, CSS, and JavaScript.
- Applied AI Engineering: Experienced in building RAG-based generative AI systems using AWS Bedrock and OpenSearch, integrated directly into enterprise production environments.
- Career Progression: Joined Verisk Analytics as an intern (Jan 2024), converted to full-time Software Engineer (Jul 2024), consistently delivering scalable, production-grade solutions in Agile SDLC environments.

TECHNICAL SKILLS

Backend: Java, Spring Boot, Spring Security, Hibernate/JPA, REST APIs, Microservices, Python

Frontend: React, HTML5, CSS3, JavaScript

Cloud & AI: AWS (S3, SQS, SNS, EC2, Lambda, DynamoDB, Bedrock, OpenSearch)

Databases: PostgreSQL

Testing & Validation: JUnit, Mockito, Postman

Tools & Version Control: Git, GitHub, ADO, IntelliJ, VS Code, PyCharm, Agile, SDLC

DevOps: Jenkins, CI/CD Pipelines

Soft Skills: Collaboration, Leadership

PROFESSIONAL EXPERIENCE

Verisk Analytics

Jan 2024 – Jun 2024

Software Engineer – Intern

Telangana, India

- Completed hands-on training in Java, Spring Boot, Maven, JUnit, React, and Selenium, gaining practical exposure to full-stack development and testing practices.
- Collaborated closely with a senior mentor to understand real-world development workflows, debugging techniques, and code quality standards.
- Contributed to bug fixes and minor feature enhancements in existing applications, improving application stability and functionality.
- Gained experience working with version control, debugging tools, and development best practices in a team environment.

Verisk Analytics

Jul 2024 – Present

Software Engineer

Telangana, India

Project: Generative AI Visual Claim Search Assistant *Tech: Java, Spring Boot, AWS Bedrock, OpenSearch, DynamoDB*

- Built RAG-based chatbot service in Java/Spring Boot, invoking AWS Bedrock Titan Embeddings for vector generation and Bedrock foundation models separately for answer synthesis, delivering context-aware responses.
- Engineered a Java/Spring Boot JSON-to-text transformation service, converting structured claim data into text chunks vectorized via Bedrock Titan Embeddings for AWS OpenSearch indexing.
- Built semantic retrieval pipeline utilizing AWS OpenSearch k-NN vector search, fetching contextually relevant documents to ground LLM responses and reduce hallucinations.
- Implemented a DynamoDB exact-match response caching layer, reducing Bedrock model invocations and improving high-frequency query response time by 70%, while optimizing infrastructure costs.
- Led development of an LLM-as-a-Judge automated evaluation framework, generating dynamic test datasets and programmatically scoring chatbot responses — reducing manual QA effort by 80% and enabling scalable, continuous validation.

Project: Digital Media Forensics *Tech: Java, Spring Boot, PostgreSQL, AWS DynamoDB, HTML, CSS, JS*

- Refactored forensic processing pipeline from sequential to parallel execution using Spring Boot, supporting ingestion of 2M+ images/day across 5 check types (Document, Internet, Metadata, Pixel, Duplicate).
- Consumed and processed REST API responses from forensic check services, implementing sub check failure detection logic and surfacing granular alert details in the Visual Claim Search UI.
- Built customer-configurable toggle system and threshold engine (time, date, distance) using Java/Spring Boot, enabling per-customer forensic verdict customization without code deployments.
- Developed multi-channel media ingestion support for REST API, SFTP, and Visual Claim Search, enabling flexible submission workflows for enterprise insurance customers.
- Engineered subscription-based billing batch jobs (daily/monthly) in Spring Boot/Java, automating image-count aggregation tied to customer subscription tiers.
- Designed DynamoDB event logging pipeline post-forensic processing, enabling downstream dashboard teams to surface per-customer forensic results in real time.
- Delivered Guidewire Marketplace accelerator and cross-BU integration services, allowing shared customers across business units to route media to the forensics platform seamlessly.

PROJECTS

Full Stack eCommerce Application | Personal Project

- Built production-grade eCommerce app using Spring Boot, Spring MVC, Spring Security with JWT, and Hibernate/JPA.
- Implemented REST APIs for product catalog, cart, and order management with role-based access control.
- Integrated Thymeleaf templating engine for server-side rendered UI with dynamic product listing pages.
- Deployed application on AWS, configuring environment for a full stack Java web application.

EDUCATION

Vasavi College of Engineering

Oct 2020 – May 2024

Bachelor of Engineering | Computer Science Engineering | CGPA: 9.00

ACHIEVEMENTS

- Star Performer of the Year 2025 – Verisk Analytics
- Quarterly Recognition Award ("Pat on the Back") — Verisk Analytics
